## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Leslie I. Bookoff (#38,074) on 04/03/2008.

### **IN THE CLAIMS**

25. (Currently Amended)

A method of treating a lesion in a nonvascular lumen of patient's body, comprising:

- providing a tissue patch having a tissue implant attached to a substrate and a protective liner covering at least a portion of the tissue implant;
- forming the tissue patch into a contracted state;
- inserting the tissue patch in the contracted state into a lumen containing the lesion;
- positioning the tissue patch in the vicinity of the lesion;
- removing the protective liner to reveal the tissue implant;
- and placing the tissue implant in the lesion.

***Response to Amendment***

Examiner acknowledges the reply filed 3/10/2008 in which claims 25-36 and 46 are pending for examination in this application.

***Information Disclosure Statement***

The information disclosure statements (IDS) that were submitted on 10/30/2006 and 3/10/2008 are in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

***Allowable Subject Matter***

Claims 25-36 and 46 are allowed over the prior art of record as filed in the 3/10/2008 reply.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed method of an endoluminally delivered tissue patch for delivering a tissue patch for treating lesions of body lumens. The tissue patch includes a substrate, a tissue implant attached to the substrate, and a protective liner covering at least a portion of the tissue implant. The tissue patch is formed into a contracted state and inserted into a lumen containing the lesion. The tissue patch then is positioned in the vicinity of the lesion. After removing the protective liner to reveal the tissue implant, the tissue implant is placed in the lesion.

The closest prior art of record is Eckert et al. (USPN5,487,889) and Widemire (USPN5,782,788), however these references do not disclose the device as claimed or described above.

Regarding claim 25, the closest prior art of record fails to teach among all the limitations or render obvious the method steps of providing a contracted tissue implant into a body lumen removing the tissue patch liner and placing the implant in the tissue lesion.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
